Akbar Raza

Telecommunications Engineering Student | Building Agentic AI amp; AI-Driven Web Solutions | Passionate about Intelligent Systems.
Karachi East District, Sindh, Pakistan

Summary

I am a Telecommunications Engineering student with a deep fascination for the intersection of connectivity and intelligence. My academic background gives me a strong foundation in the physical layers of communication, while my passion drives me to master the logical layers of the future: Artificial Intelligence. Currently, I am diving deep into Agentic AI—exploring how autonomous agents can reason, plan, and execute complex tasks. I believe the future of the web is not just static pages, but dynamic, intelligent environments. To that end, I am actively learning AI-driven Web Development, focusing on integrating LLMs and AI models into functional web applications. My current focus areas include :Agentic AI: Understanding autonomous workflows and LLM orchestration.AI Web Development: Building applications that leverage AI APIs to solve real-world problems. Telecommunications: Bridging the gap between network infrastructure and AI-driven optimization. I am eager to apply my evolving skills to internships or collaborative projects where I can contribute to building smarter, more connected systems.

Education

Sir Syed University of Engineering & Technology (SSUET)

Bachelor's degree, Telecommunications Engineering · (2023 - 2027)

Aligarh Institute of Technology

Diploma of Associate Engineer · (2020 - 2023)

Army Public School

Matric · (2014 - 2020)
